

APEX

J-Craft's newly redesigned APEX body is built stronger, cleaner, smarter, and ready for whatever the job site throws at it. Available in square or elliptical styles, APEX gives you the look and performance you expect, now with the added strength of press-formed components and no external horizontal welds for a cleaner exterior and longer-lasting paint. The new 84/99 standard width increases body coverage over the tires and delivers an approximate 6% gain in yardage without increasing body length.

Constructed from high-strength steel, the APEX provides exceptional durability without excess weight. Whether you choose the smooth-side square body or the rugged elliptical floor design, each option is built to haul with confidence. The elliptical package features a generous side-to-floor radius that reduces impact stress and helps material release easily. And with our single-panel tailgate, available with air high-lift or double-link upper hinges, dumping into pavers, chip spreaders, and tight jobsite conditions is quick, clean, and efficient.

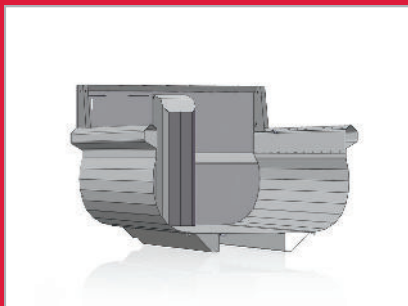

NO EXTERIOR HORIZONTAL WELDS
Stronger, cleaner,
longer-lasting exterior built
with formed AR Steel

16" FORMED RADIUS
Reduce material hang-ups
with angled corners for
cleaner, faster dumping.

EASY ACCESS GREASE POINTS
Grease upper hoist blocks
easier from remote grease
points for safer maintenance.

**FULLY FORMED AR
STEEL SIDE PANELS**

Additional features:

- Bolt-in torque tube
- Rubber front body isolators
- Sight Window
- Trimline Trunnion Doghouse
